

INSTA DEFSEC OY

Insta DefSec Oy is part of the family-owned Insta Group and is a leading provider of defence and security solutions in Finland with more than 250 experts working with security critical systems. Our long experience in the defence and security field in combination with quality and security certified operating practices has ensured market leadership in selected defence, public safety and information security fields in Finland.

Insta builds information security solutions for demanding organisations, such as authorities and security oriented enterprises, using the best tools available on the market. Depending on the application, we use our own products or utilise our extensive technology partner network. Depending on customer needs, we deliver our solutions as products, projects, services or a combination of these.

Our **PKI solutions** use digital certificates to enable applications such as secure email and networking or web service authentication. Our CA product, Insta Certifier, is the core of our CA services and is also distributed globally through our partner network. We provide all knowledge and components necessary to build and maintain a complete PKI system, including consultation, training and security hardware, such as smart cards and HSMs (Hardware Security Modules). Insta is a Thales technology partner and the official reseller of Thales security hardware products in Finland.

Insta **VPN solutions** protect communication over unsecured networks, enabling secure connectivity for multi-site organisations. Our solutions are targeted for environments requiring the highest levels of security, such as governmental and military use as well as enterprises with security critical network connections. Our VPN product, Insta SafeLink, has been approved by the Finnish National Communication Security Authority (NCSA-FI) to secure up to CONFIDENTIAL (level III) information. We use Insta SafeLink to provide high security VPN as a service.

Our **IAM solutions** streamline user and access related processes, providing improved information security and productivity. Insta provides solutions for Identity Management, Access Management, Single Sign-On and Log management & SIEM. Insta is a vendor independent IAM provider and our solutions are based upon products from leading IAM vendors, such as NetIQ.

Insta **information security consulting** services ensure that systems and networks meet the security level required by the customer. Our certified experts are specialists in designing and building systems that comply with information security policies and requirements, such as KATAKRI and Common Criteria. We provide SW&HW evaluation services that help in finding optimal solutions in terms of both security and cost-effectiveness. We also integrate these solutions into customer networks. Our software development services include security-oriented software architecture design and development projects.
